

Solaplex™ Pigments

Can Coating Application

Can Coatings are consumer goods frequently used but seldom considered for their technology. Coated can components include:

- Exterior Basecoats
- Exterior Rim-coats
- Inside Spray
- Metal Decorative Inks
- Over-varnish

Coating technology has gradually transformed from vinyl to epoxy based binders, and can be applied as a wet paint, a powder coating or a UV curable coating.

- Solaplex™ Pigments provide colour permanence and consistent performance, independent of the coating.

- Bright, clean colour shades can be formulated cost-effectively by combining Solaplex™ Pigments with a wide range of organic colourants.

- Solaplex™ Pigments are compliant with the European Guideline for Indirect Food Contact and the EN71:3 Toys Test for plastics.
