

Solaplex™ Pigments

Yacht and Marine Coatings Application

Yacht and Marine coatings account for just 2%, by volume, of the paint market. Although a niche area, this sector demands the highest performance raw materials and colourants. Constant exposure to hot, humid, salty conditions remains a technical challenge to any protective coatings producer. Seldom are pigments tailored to this application.

Solaplex™ Pigments offer added value.

Solaplex™ Pigments combine the durability usually associated with conventional mixed metal oxide pigments, with the strong bright colours of a new tinbased chromophore.
